Application for a position as Full-Stack Laravel Web Developer

Dear Hiring Manager

I was born in 10th June 2000; I completed my bachelor's degree in computer information systems in the summer of 2022 at the University of Jordan in Amman, Jordan. Until the beginning of 2023, I worked as a PHP web developer at the company Edexy.

Additionally, I have been teaching programming online and in-present to university students in programming thinking and logic, data structures, databases, web developing and various programming languages like C, C++, Java, Python and **PHP** via a platform called teacherprivate.com since 2021, which is my third year at university. I joined my current company since almost a year ago, I have gained massive experience during this year in wide areas of technologies such as AWS, Laravel, Vue.js, HTML, CSS, JS, TS, Gitlab, Mysql and more.

Previously, and to secure the livelihood and study costs, I have worked continuously in many jobs since my school days. I worked for instance: barista, water, cashier, mall worker and in a vegetables store.

On 17th July 2023 I entered the Federal Republic of Germany with a visa for job seeking according to § 20 Abs. 1 und 2 AufenthG.

I live here in Dortmund with my brother, who has been living here since 2015 and has been working as a physiotherapist for three years. I am a Syrian national and have lived most of my life so far in the two capitals Damascus and Amman. My mother tongue is Arabic. I also speak business fluent and practical English.

At the first of November 2023, I joined my current company that is BurdaForward as a Full Stack Developer. I had a massive experience with working in an agile team and following the scrum playbook.

Due to the unexpectedly fast issuance of the entry permit of my visa, I wasn't able to complete German language course in Jordan, so that my German is currently still at A1 level.

I am eager to fit in with the German society, which so far, I have doing very good job with.

I am always eager to embrace new challenges and expand my skill set to contribute effectively to any project. My dream tech stack would be:

• Laravel

• VueJS

• Tailwind CSS

• MySQL

I offer you and your company ambition, alert attention, structuredness and perseverance especially during the training phase, as well as loyalty and the ability to think along. As a

young professional and as a modern (educated) specialist from an Arabic cultural background, I can offer you particular malleability, the ability to reflect and a high degree of willingness to not only involving but help shaping the development processes of the company.

I would be very pleased to receive an invitation to a joint interview.

Yours sincerely,

Mahmoud Othman
